Trade Area Details

How do I find Trade Area information from Data Layers on the map?

1. Click Research, select Commercial Map Insights.
2. Enter a geographic area into the search bar.
3. Select the magnifying glass.
4. Choose a Demographic Indicator from the Data Layers menu. (Note you can also use the Draw, Driving, and Show Geographies searches to directly create Trade Area Reports.)
5. Select a shaded area on the map.
6. Choose View Trade Area Details or Create Trade Area Report.

Where else can I find Trade Area information?

1. Choose Commercial on the search toggle.
2. Enter the property address for your Trade Area.
3. Select Trade Area on the top navigation.
   - The geography will default to the zip code.

About the data you’ll find in the Trade Area Report

Tapestry is a data product developed by Esri, the leader in GIS software. Tapestry classifies U.S. residential neighborhoods into unique market segments based on socioeconomic and demographic characteristics. For a broader market view, Tapestry also consolidates segments into LifeMode (life cycle) groups and Urbanization (location) groups.

Trade Area Information will help you understand the general economic and demographics such as age, daytime population, and disposable income. Also included is a deep dive into each tapestry segment to help you understand more deeply the preferences and behaviors of the community so that you can help your client appeal to them.
